

OVERVIEW

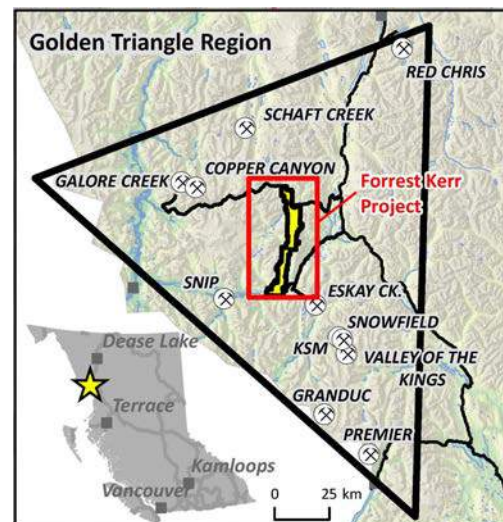

Aben Resources Ltd. (TSX-V: ABN) (OTCQB: ABNAF) is a publicly traded Canadian GOLD exploration company with significant projects in BRITISH COLUMBIA, SASKATCHEWAN and the YUKON.

The Company's 23,000 hectares FORREST KERR GOLD PROJECT is located in the heart of a region called the GOLDEN TRIANGLE in northwestern BC. This region has hosted significant mineral deposits including: Pretium (Brucejack), Eskay Creek, Snip, Galore Creek, Copper Canyon, Schaft Creek, KSM, Granduc, Red Chris and more. Aben is acquiring a 100% interest in the Forrest Kerr Project located along the Forrest Kerr Fault which consists of a 40 km long north-south belt overlying rocks of the Hazelton and Stuhini Groups, a complex assemblage of volcanic accumulations with intervening sedimentary sequences which are host to significant gold deposits in the Golden Triangle region. The first drill hole of 2018 at the Forrest Kerr Project discovered multiple high-grade zones including 62.4 g/t Gold over 6.0 meters within 38.7 g/t Gold over 10.0 meters starting at 114 meters downhole at the Boundary North Zone.

Aben is also acquiring up to an 80% interest in the 4,657 hectares CHICO GOLD PROJECT located 125 km east of La Ronge, Saskatchewan and 40 km south of SSR Mining's Seabee / Santoy mine complex. Chico property highlights include the presence of a 1.5 km mineralized structural corridor confirmed by geophysical surveys, geological mapping and recent soil sample coverage. Rock samples collected in 2016 along this structural corridor ranged from trace to 20.2 g/t Gold. Recent work resulted in numerous high-priority drill targets being identified.

Aben also holds a 100% interest in the 18,314 acre JUSTIN GOLD PROJECT located in the southeast Yukon. The Justin property is located on the Tintina Gold Belt to the immediate southeast of Golden Predator's 3 Aces gold project. Previous drilling by Aben on the Justin Project intercepted 60 meters of 1.19 g/t Gold including 21 meters of 2.47 g/t Gold in the POW Zone. The geochemical signature of the mineralized zone is characterized by elevated Au, Bi, Cu, Mo and W supporting an Intrusion Related Gold System (IRGS).

Aben Resources Ltd.'s mission is to increase shareholder value by developing exploration projects near world-class deposits that have the potential of becoming new discoveries.
